

The art of solar

LUMOS

What we do

Lumos Solar designs, engineers and produces architectural solar products. We support design professionals, installers, developers and facility owners in integrating our products into new and existing buildings. Helping take projects from concept to installation is our specialty and we have an unparalleled track record of successful project completion.

Our unique solutions occupy a space where the solar industry and architectural building products overlap.

We are here to help make your solar dreams come true.

How we do it

Lumos Solar was founded in 2006 with the mission of helping solar become a mainstream energy source. We saw a need in the market for solar products that were efficient, durable, functional, and beautiful. We believe solar can be an interactive and functional design element that enhances users experience and enjoyment and does not have to be an afterthought.

Our systems approach to product design ensures that all products work together seamlessly to achieve the best aesthetics and functionality.

“When I am working on a problem, I never think about beauty, but when I have finished, if the solution is not beautiful, I know it is wrong.”

Buckminster Fuller

We use the highest quality components and state-of-the-art US manufacturing to create the most beautiful and functional solar products available.

LUMOS

Solar/Shade

Solar power and shade are a match made in heaven.

Where you need shade the most, is also the best place to generate solar energy. Our focus is on that unique intersection created by solar panels where they produce solar power on one side and shade on the other.

Our solutions are designed to optimize solar power generation and the shade and shelter created by installing solar in overhead applications like carports, canopies, awnings, etc..
